INTRODUCTION(cc):

This document presents the comprehensive Project Plan for Iron Core and outlines the strategy our team will follow to successfully develop and implement the application. It defines the project objectives, core functionalities that will make the app innovative and competitive, and the overall vision designed to attract potential investors and stakeholders. Additionally, this document emphasizes the value and benefits that the application will provide to users, as their satisfaction, motivation, and overall experience remain our highest priorities.The plan is organized into clearly defined sections, including the development schedule, team organization, and a structured roadmap that will guide the team through the design, development, testing, and deployment phases. Each phase identifies specific responsibilities and deliverables to ensure efficient collaboration and accountability. This structured approach ensures that all team members understand their roles, project milestones, and overall expectations while maintaining alignment with the project's goals.

The purpose of Iron Core is to provide users with an accessible, motivating, and technology driven fitness platform. Our goal is to empower individuals to improve their physical health by offering personalized workout programs, comprehensive nutrition guides, and membership tiers (Silver, Gold, and Platinum) at affordable pricing options for different users. The app also includes a rewards based engagement system

designed to encourage consistency and long-term commitment. By integrating AI-driven recommendations and interactive features, Iron Core creates a personalized and engaging experience. Additionally, the platform promotes weekly goal tracking and streak-based rewards to motivate users to stay consistent with their fitness routines. This system helps prevent users from abandoning the gym and supports the development of healthier habits, ultimately promoting a better quality of life.

SYSTEM SCOPE (JG):

Problem/Opportunity Description:
The goal of this project is to develop a sustainable business model and digital platform that effectively motivates our target audience to engage in regular gym attendance and healthier lifestyles. By combining engaging features with meaningful incentives, the solution aims to address common barriers to fitness such as lack of guidance, accountability, and motivation. At the same time, the project seeks to leverage the growing demand for technology-supported fitness solutions to create a scalable, revenue-generating business. By aligning user success with business performance, the model is designed to drive long-term customer engagement and strong financial returns.

Anticipated Business/Personal Benefits:
From a business perspective, we aim to establish a system that makes it easier for customers to access gym resources while encouraging consistent usage through

targeted incentives. This increased engagement is expected to improve customer retention, support upselling into higher membership tiers, and ultimately generate substantial, recurring revenue. For users, the platform is intended to simplify their fitness journey by providing convenient access to gym-related tools and resources, making it easier to stay active and maintain healthy habits. The incentive structure and supportive features are designed to help users stay motivated, achieve their personal health goals, and experience a more rewarding relationship with fitness.

System Capabilities:

The major functions of the system include:

- A UPC/QR scanner that allows users to scan gym equipment and access usage demonstrations and related guidance
- Remote training capabilities that enable users to receive personalized coaching and workout programs
- Structured nutrition plans tailored to support users' fitness goals
- Tiered membership levels offering differentiated benefits and pricing
- A points accrual and rewards system that incentivizes consistent engagement and healthy behaviors

STAFF ORGANIZATION (SB)

Our staff is organized accordingly:

Project Manager / Documentation Lead (Carlos Cardona)

- Oversees project planning, scheduling, documentation, and coordination between team members.

System Analyst / Business Model Lead (Joseph Gomez)

- Defines system requirements, business strategy, membership tiers, and incentive structures.

Technical & Quality Control Lead (Bircan Sahin)

- Focuses on system functionality, feature feasibility, testing strategies, and performance evaluation.

TRACKING AND CONTROL OF MECHANISMS (SB)

To ensure successful project execution, we will employ the following tracking and control mechanisms:

Weekly Progress Meetings

- Team check-ins to review progress, address challenges, and adjust priorities.

Milestone Reviews

- Formal reviews at the end of each phase to ensure deliverables meet project requirements.

Risk Management

- Identification and mitigation of risks such as timeline delays and feature complexity.

Quality Assurance Testing

- Continuous testing to verify system functionality, usability, as well as performance.
